

OnePRS Fund Review

In the US, reported new daily COVID-19 cases have been on a declining trend since the beginning of the month. That being said, the percentage of positive COVID-19 tests remains above the WHO's recommended limit for reopening in 27 US states. Politically, negotiations on a new COVID-19 relief bill continued to stall in Washington while the official nomination of Donald Trump had been announced for the Republican party's Presidential candidacy. Economically, US manufacturing and service PMIs had beaten expectations with IHS market readings of 53.1 and 54.8 respectively. In terms of monetary policy, the Fed announced a shift to average inflation targeting confirming that monetary policy will remain supportive for the foreseeable future. Overall, the S&P 500 and the NASDAQ rallied to new highs exceeding pre - COVID 19 levels by rising 7.2% and 9.7% respectively over the month.

Over in Europe, there was a surge in COVID-19 cases in several countries, including France and Spain, tracing close to levels seen at the height of the pandemic in March and April. European risk assets continued to benefit from the European Council agreement in July to establish a €750 billion European Union (EU) recovery fund. Looking into China, negatives were the escalating US-China tension as the US further added 38 Huawei-affiliated companies to the Entity List and tightened the financial scrutiny over ADRs. Nonetheless, China's economic front continued to draw most of the attention with July's activity data confirming continuous economic recovery albeit moderating momentum. The Caixin manufacturing PMI rose to 53.1 reaching a new high since February 2011. On the other hand, non-manufacturing PMI continued rising steadily into August to 55.2. Overall, both the SHCOMP and SHSZ300 rose 4.5% respectively.

On commodities, Brent and WTI crude continued to post their fourth monthly gains of 4.6% and 5.8% respectively with oil demand driven by expected economic activity recovery while OPEC+ continued with their agreed production cuts on the supply side. CPO prices followed in tandem rising 4.1% for the month. Gold prices started the month strong peaking at \$2,063 but then experienced its worst day decline in 7 years plunging 5.7% to \$1,911. The precious metal then traded sideways closing 1% lower over the month at \$1,967.

Locally, it was a down month for Malaysian equities as the FBMKLCI and FBM100 slide 4.9% and 3.3% respectively in local currency effectively wiping out the previous month's gains. This was attributed to a negative month for the gloves sector which could be due to investors locking in gains amidst rising vaccine news flows. Malaysia's June 2020 unemployment rate declined month-on-month to 4.9% from a record-high of 5.3% in May 2020 as more sectors, including the services industry, reopened due to the implementation of the nation's recovery movement control order (RMCO) to revive the country's economy while curbing the COVID-19 pandemic. The trade balance printed a surplus of MYR25.2 billion in July, up from a surplus of MYR20.9 billion in June. Meanwhile, Bank Negara Malaysia's international reserves amounted to US\$104.2 billion as at July 30, 2020, slightly higher compared with US\$104.0 billion as at July 15, 2020.

On fixed income front, in August, US Treasury (UST) yields climbed higher on vaccine hopes and better-than-expected economic data. The US economy added 1.8 million jobs in July after a strong increase of 4.8 million in June, as the unemployment rate continued to decline from 11.1% in June to 10.2% in July. Meanwhile, the US ISM Manufacturing index rose from 52.6 in June to 54.2 in July (highest since March 2019), boosting optimism over the US' economic recovery. Demand for UST was also dampened by the increased supply of government bonds during the month, to fund the US government's fiscal stimulus plans, as 10-year UST yields climbed from 0.53% as at end-July to 0.72% on 13th August.

Towards month-end, demand for UST remained supported by the US Fed's minutes for its July monetary policy meeting, which reiterated policymakers' concerns over the highly uncertain path for US economic recovery, as the ongoing public health crisis poses considerable risks to the medium term outlook. The Fed also announced its new approach to monetary policy, which will likely keep interest rates low for the next few years. Month-on-month (M-o-M), the UST yield curve rose across the board, with 2Y and 10Y UST yields ending the month at 0.13% and 0.70% respectively (end-July: 0.11% and 0.53%).

Locally, the Malaysian Government Securities (MGS) market remained active despite the holiday-shortened month. Buying momentum was driven by investors' expectations of an upcoming interest rate cut after the Malaysian economy contracted by -17.1% year-on-year (y-o-y) in 2Q20 as compared to an expansion of +0.7% y-o-y in 1Q20. Nonetheless, MGS yields subsequently trended higher towards month-end, tracking similar movements in global bond yields. Demand for primary government bond issuances remained healthy, as the 15Y Government Investment Issue (GII) and 20Y MGS auctions (issuance size of RM4.0 billion each) were both oversubscribed by around 1.4 times. M-o-M, 3Y MGS yields fell by 10bps to 1.83%, while 10Y MGS yields rose by 7bps to 2.60% as at end-August.

To recap, Bank Negara Malaysia (BNM) lowered the Overnight Policy Rate (OPR) by 25bps on 7 July, to a record low of 1.75% (year-to-date reduction of 125bps). In its policy statement, BNM highlighted that the reduction in OPR is intended to provide additional policy stimulus to accelerate the pace of economic recovery.

Meanwhile, the international reserves of BNM amounted to USD104.3 billion as at 14 August 2020. The reserves position is sufficient to finance 8.5 months of retained imports and is 1.1 times total short-term external debt.

OnePRS Fund Outlook

Equities are expected to remain volatile as the pace of economic recovery remains fragile and uneven, while COVID-19 still poses a risk. Further escalation of US-China geopolitical tensions ahead of the US presidential elections will also continue to weigh on sentiment. Nevertheless, asset prices could remain buoyed as policymakers remain supportive with aggressive fiscal support and liquidity programs.

The local market could remain range-bound, with the glove sector continuing its consolidation mode and growth in other sectors being lackluster. That being said, with the gradual reopening in June, outlook for the second half of the year looks to be better for most sectors.

For fixed income market, the outlook for the US economy continues to be clouded by uncertainties stemming from the pandemic and its negative effect on consumer and business activity. The Fed is expected to keep interest rates low for a prolonged period of time to support the US economy. At the same time, ongoing US-China tensions continue to add to the gloomy growth outlook. Over the near term, given the lingering economic uncertainties, demand for safe haven assets (including UST) may continue to be supported by accommodative monetary policies by global central banks.

Locally, the Malaysian economy is expected to recover gradually in the second half of 2020, further supported by a gradual improvement in global growth conditions; however, the pace and strength of the recovery remain subject to downside risks emanating from both domestic and external factors. Meanwhile, domestic headline inflation remained in the negative region for a fifth consecutive month at -1.3% y-o-y in July (June: -1.9%), bringing the year-to-date average to -0.9%. This was largely driven by lower fuel prices compared to last year, and discounts for

household electricity bills. For the full year 2020, average headline inflation is likely to be negative, primarily reflecting substantially lower global oil prices. Therefore, given muted inflationary pressures and continued uncertainties ahead, Bank Negara Malaysia (BNM) is widely anticipated to remain accommodative to support domestic growth, with the central bank assuring that it would utilize its policy levers as appropriate to create enabling conditions for sustainable economic recovery.

While BNM expects the domestic economy to gradually recover, the pace and strength of the recovery remain subject to downside risks emanating from both domestic and external factors. Meanwhile, average headline inflation is likely to be negative for the full year 2020, primarily reflecting substantially lower global crude oil prices.

Given muted inflationary pressures and continued uncertainties ahead, BNM is widely anticipated to remain accommodative to support domestic growth, with the central bank assuring that it would utilize its policy levers as appropriate to create enabling conditions for sustainable economic recovery.

OnePRS Fund Strategy

For all PRS funds (except Kenanga OnePRS Growth Fund); refer to the respective underlying fund(s).

For Kenanga OnePRS Growth Fund, we continue to remain selective and prefer sectors that see more resilient growth. We maintain an overweight in tech and exporters due to strong earnings growth and also favour cyclicals and commodity stocks that benefit from China's rebound and improving commodity prices.

FUND OBJECTIVE

Seeks to provide capital growth by investing in the Target Fund i.e. Kenanga Syariah Growth Fund.

Fund Category/Type

Feeder Fund (Equity)

Launch Date

28 October 2014

Trustee

Maybank Trustees Berhad

Benchmark
